LUMEN ADL FOR TOKYO PRESTIGE ·
NOVEMBER 2026

Four design directions

The same cars, prices and facts, shown four ways. Each direction answers a different finding from the research, so the choice is about which buyer the site should put first.

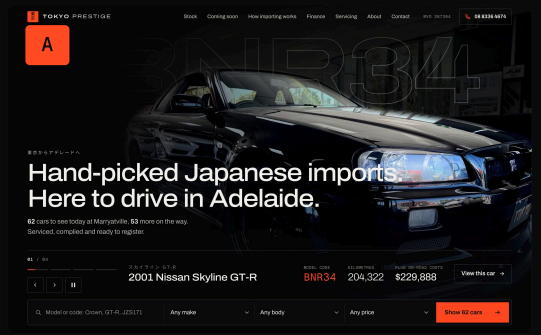

A **The showroom at night**
Dark and cinematic. The car lit, everything else quiet. Built and live.

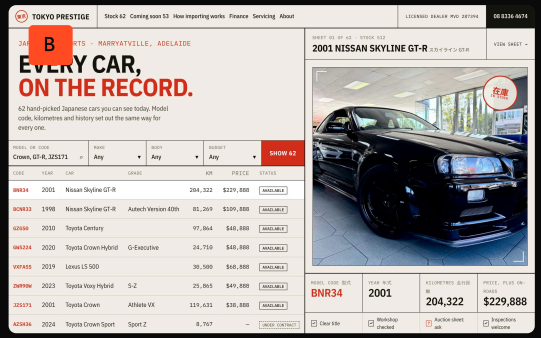

B **The record**
The site as an inspection sheet. Paper, ruled boxes, data first.

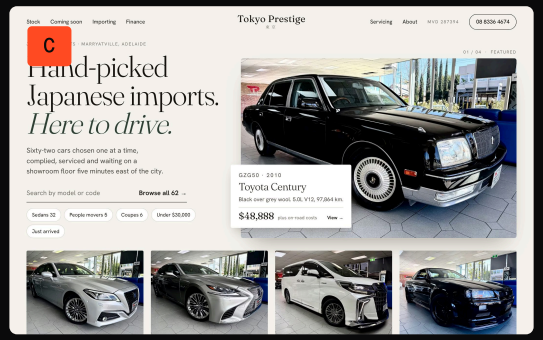

C **The gallery**
Light and editorial. One car at a time, labelled like an exhibit.

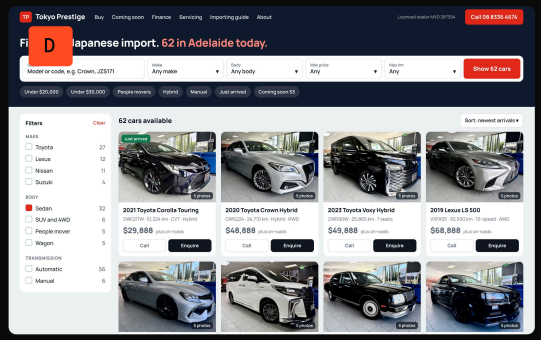

D **Find it fast**
A marketplace layout. Search and results on the first screen.

EVERY CAR, PRICE AND FIGURE SHOWN IS FROM TOKYOPRESTIGE.COM.AU, READ 11 NOV 2026. B, C AND D ARE STATIC MOCK-UPS OF TWO SCREENS; A IS THE WORKING SITE.

Direction A · built

The showroom at night

Their own photos with the lights turned down: the room falls to near black and the car stays lit, with its model code set large behind it. The page reads like a spec plate.

Who it puts first

The enthusiast and the luxury buyer. It makes a $229,888 GT-R and a $29,888 Corolla both look looked-after.

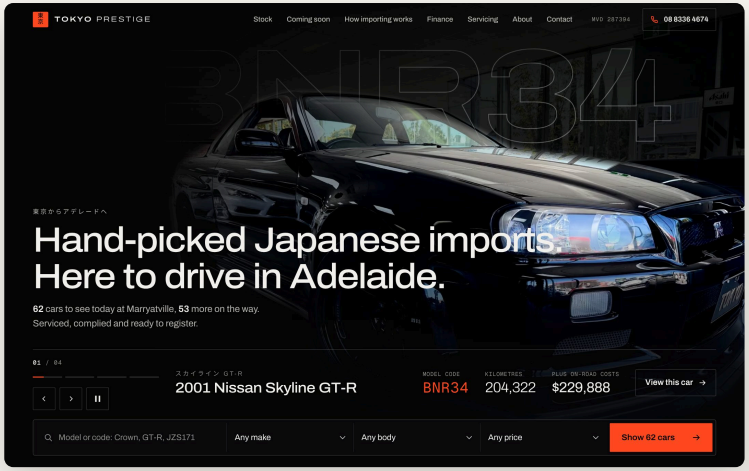

From the research

Premium sites win by restraint (Classic Throttle Shop, Porsche, Polestar). No dealer site we found has purposeful motion or a clean first phone screen with the car, the search and one action.

Colour

Type

Archivo, wide. Geist Mono for codes.

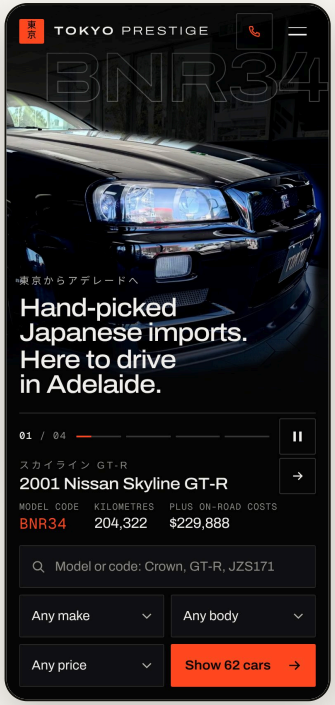

HOMEPAGE, DESKTOP

Strengths

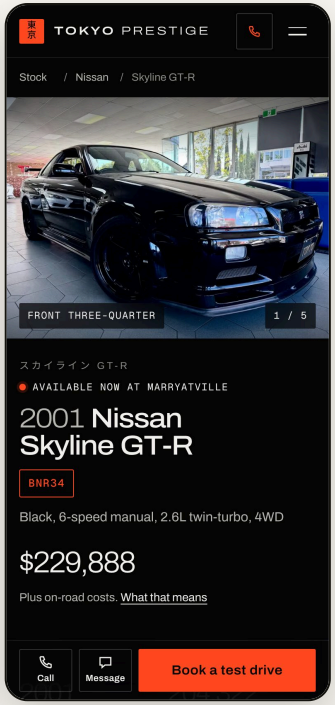

- Most distinctive; nothing like it among Australian importers
- Hides the busy showroom backgrounds
- Motion earns attention in the pitch

Risks

- Dark sites can feel exclusive to a family buyer
- The hero needs a hand-traced outline per featured car

HOMEPAGE

CAR PAGE

Direction B · mock-up

The record

The whole site borrows the form of a Japanese auction sheet: warm paper, ruled boxes, monospaced data and a red seal for status. The stock is a table you can scan, not a wall of cards.

Who it puts first

The wary buyer and the enthusiast who searches by chassis code. It says “nothing hidden” before a word is read.

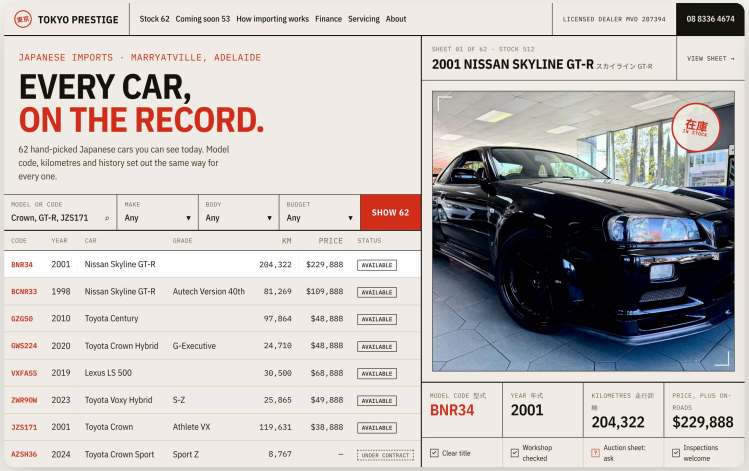

From the research

The top buyer fear is odometer and history fraud; “if the dealer can't show you the auction sheet, walk away”. No dealer site structures proof. BE FORWARD alone filters by model code.

Colour

Type

IBM Plex Sans Condensed. IBM Plex Mono.

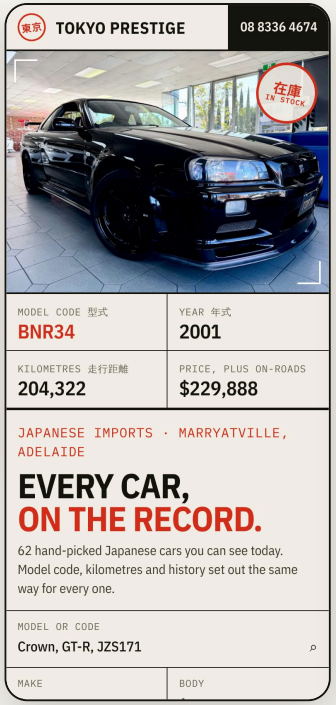

HOMEPAGE, DESKTOP

Strengths

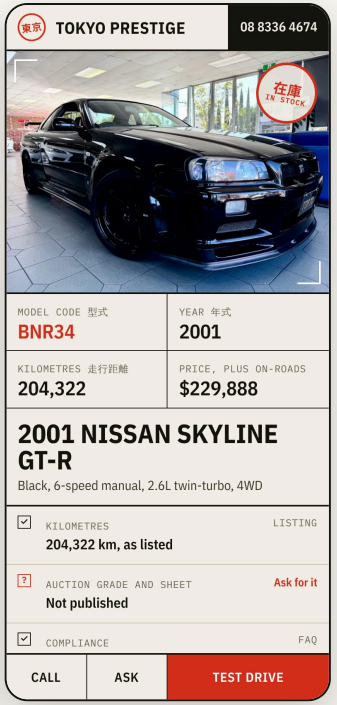

- Trust is the design, not a section
- Fastest to scan 62 cars
- Photos need no treatment

Risks

- Promises paperwork the listings don't yet have
- Less glamour for the prestige stock
- A table suits a desk better than a phone

HOMEPAGE

CAR PAGE

Direction C · mock-up

The gallery

Light, calm and editorial. A serif headline, generous space, and one featured car at a time with a label like an exhibit card. The opposite of a car yard.

Who it puts first

The luxury-for-less buyer comparing a Crown or an LS with a new mid-range car, and anyone put off by “JDM” styling.

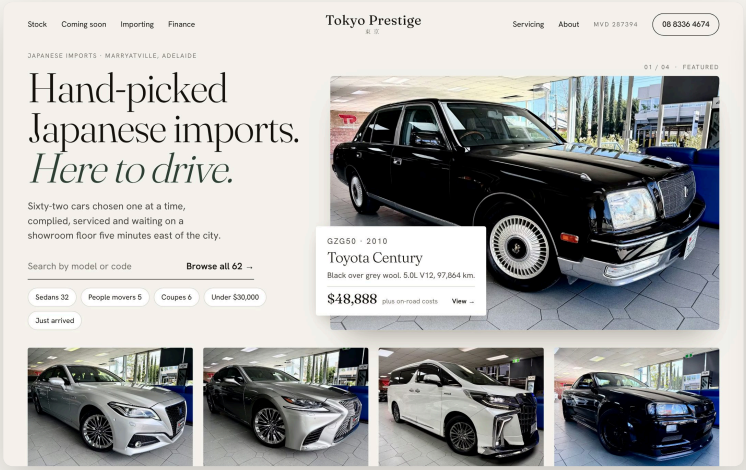

From the research

Classic Throttle Shop and Romans International feel premium through light type, uniform photos and space. Buyers of Crowns and Lexus talk about condition and comfort, not heritage.

Colour

Type

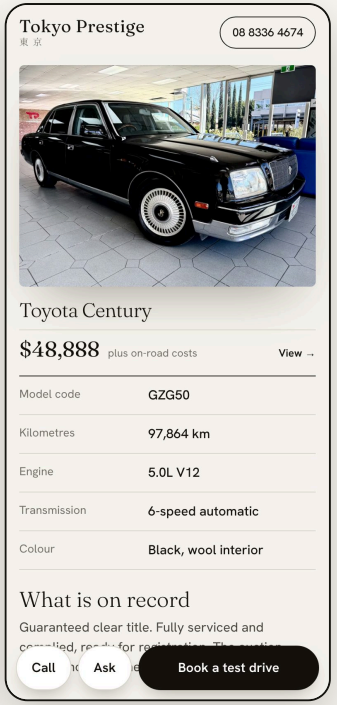

Fraunces, light. Hanken Grotesk.

HOMEPAGE, DESKTOP

HOMEPAGE

CAR PAGE

Strengths

- Reads as prestige, not performance
- Welcoming to families and older buyers
- Light pages suit long reading

Risks

- Shows the showroom backgrounds as they are; wants better photos
- Search is quieter, so finding a car takes a tap more
- Least “Tokyo”

Direction D · mock-up

Find it fast

A marketplace layout. No hero image: the search, quick filters and the first eight cars with prices are all on the first screen, with Call and Enquire on every card.

Who it puts first

The family and budget buyer who arrives from Carsales or Facebook with a price in mind and wants to compare quickly.

From the research

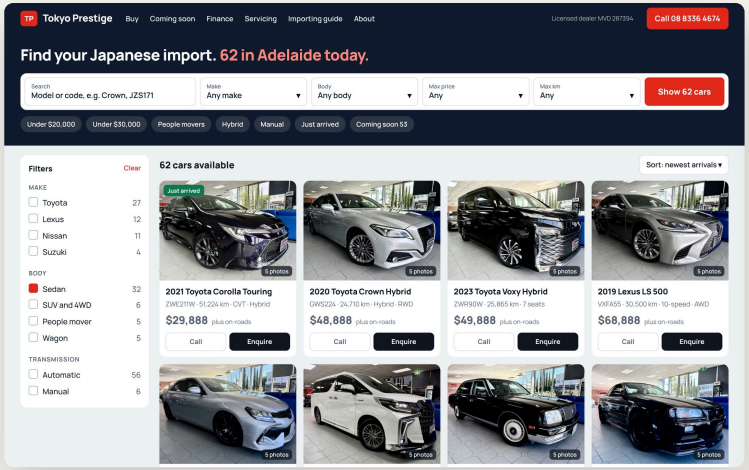

Autotrader and AutoProject lead with search, a live count and price. On Tokyo Prestige's current phone homepage the first price is 8,070px down, and every filter on the stock page is empty.

Colour

Type

Manrope, bold.

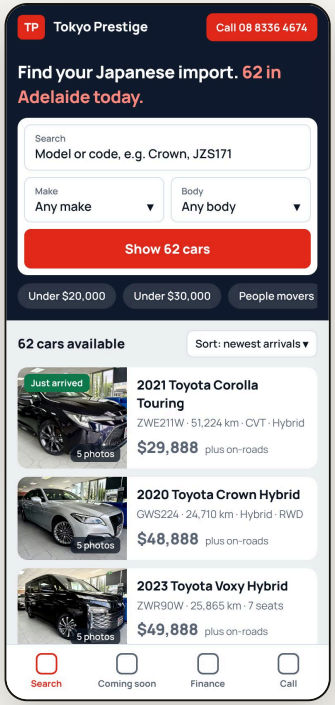

HOMEPAGE, DESKTOP

Strengths

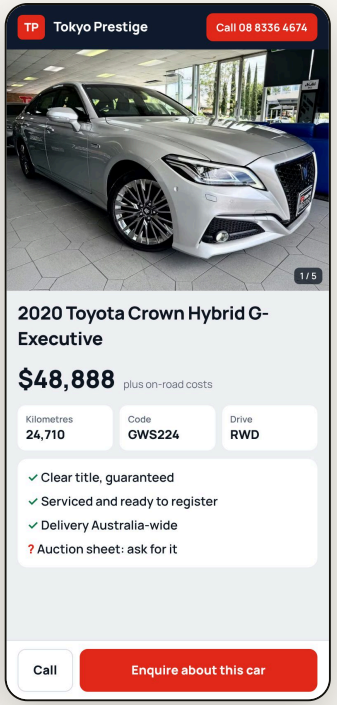

- Fewest taps to a car and a price
- Familiar: nothing to learn
- Uses their red

Risks

- Looks like every marketplace; little reason to remember it
- Flattens a GT-R and a kei truck into the same card
- Least impressive in a pitch

HOMEPAGE

CAR PAGE

Which one, and why

	A · SHOWROOM AT NIGHT	B · THE RECORD	C · THE GALLERY	D · FIND IT FAST
First impression	Cinematic, expensive	Exact, trustworthy	Calm, refined	Practical, familiar
Buyer it favours	Enthusiast, luxury	Wary buyer, enthusiast	Luxury-for-less, family	Family, budget
Layout	Full-screen showcase, search docked below	Split sheet: stock table and one car's record	Headline beside one framed car	Search bar, filter rail, card grid
Taps to a car with a price	0 (featured car), 1 to the list	0 (eight in the table)	0 (five shown)	0 (eight cards)
Works with today's photos	Yes: the room is darkened	Yes: photos are small	Partly: backgrounds show	Yes: photos are small
Needs from the dealer	Nothing new	Auction sheets, to deliver on its promise	Cleaner photography	Nothing new
Stands apart from competitors	Most	Strongly	Moderately	Least

My recommendation: A, with B's discipline inside it.

A is the one the owner will remember and it flatters the stock they have photographed today. Its car page already carries B's idea (the “what is on record” panel with a source for each line). If the dealer starts publishing auction sheets, that panel can grow toward B without a redesign.

If the owner wants lighter or simpler.

C is the safer choice for a buyer base that is mostly Crowns, Lexus and people movers, but it should wait for better photos. D would be the quickest to build and the easiest to use, and the least likely to win the project on looks. A light theme of A is also possible: the layout and motion stay, the palette changes.
