LUMEN ADL FOR TOKYO PRESTIGE · NOVEMBER 2026

Five design directions

The same cars, prices and facts, shown five ways. Each direction answers a different finding from the research, so the choice is about which buyer the site should put first.

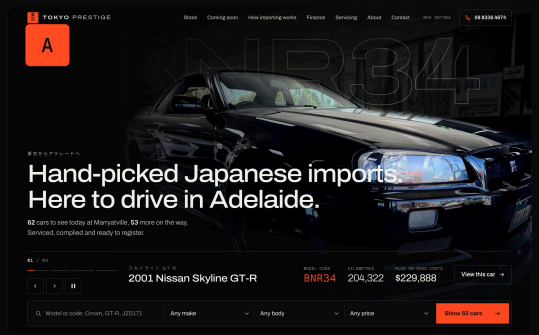

A — **The showroom at night**
Dark and cinematic. The car lit, everything else quiet. Built and live.

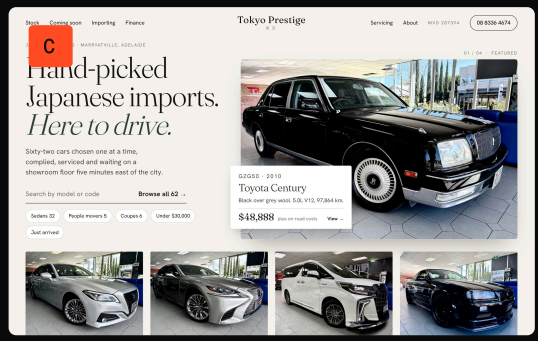

C — **The gallery**
Light and editorial. One car at a time, labelled like an exhibit.

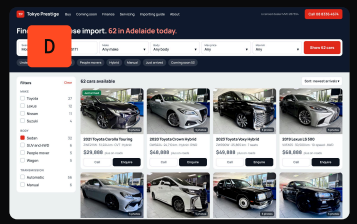

D — **Find it fast**
A marketplace layout. Search and results on the first screen.

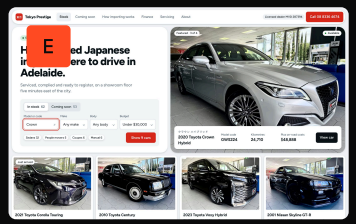

E — **Built on Astryx**
Assembled from Meta's open design system, with a Tokyo Prestige theme. Light and dark.

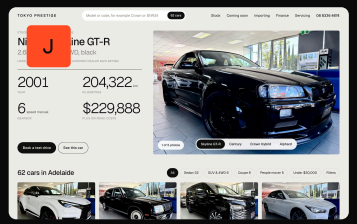

J — **The figures**
Four figures, always the same, always first. Light and calm.

ALL CARS, PRICES AND FIGURES ARE FROM TOKYOPRESTIGE.COM.AU, 11 NOV 2026. A IS THE WORKING SITE; THE OTHERS ARE MOCK-UPS OF TWO SCREENS. THE LAST PAGE SETS OUT WHAT AUTOMATION AND AI CAN ADD AFTER THE SITE.

Direction A · built

The showroom at night

Their own photos with the lights turned down: the room falls to near black and the car stays lit, with its model code set large behind it. The page reads like a spec plate.

Who it puts first

The enthusiast and the luxury buyer. It makes a $229,888 GT-R and a $29,888 Corolla both look looked-after.

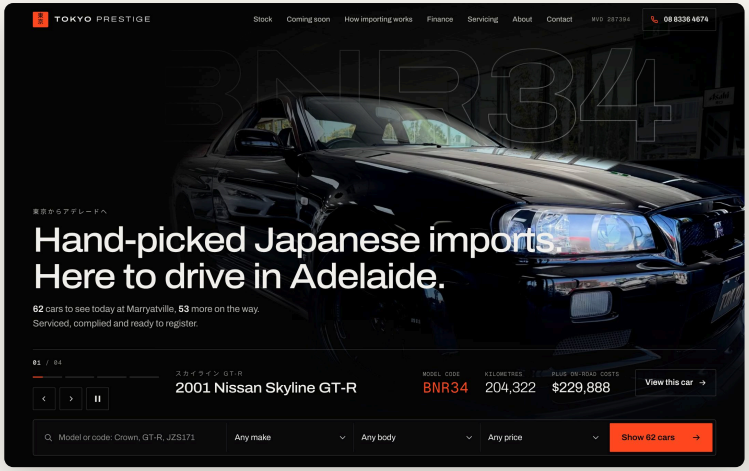

From the research

Premium sites win by restraint (Classic Throttle Shop, Porsche, Polestar). No dealer site we found has purposeful motion or a clean first phone screen with the car, the search and one action.

Colour

Type

Archivo, wide. Geist Mono for codes.

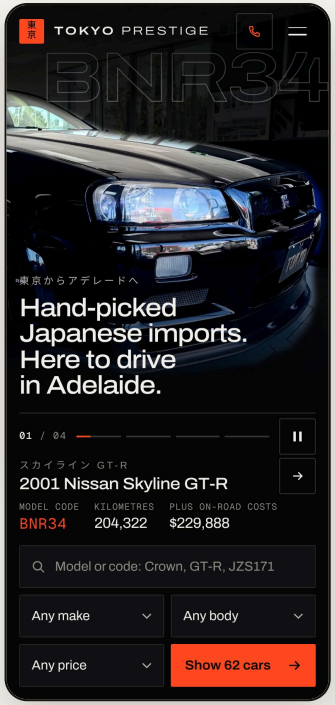

HOMEPAGE, DESKTOP

Strengths

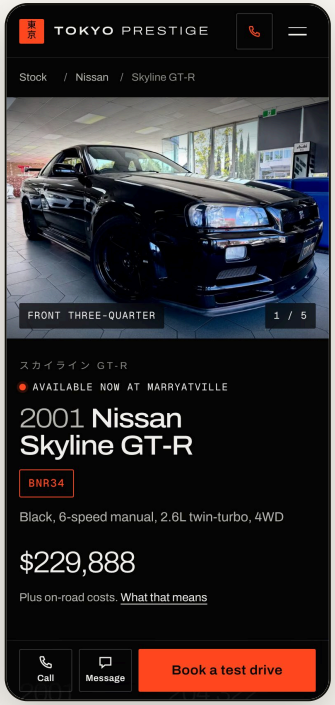

- Most distinctive; nothing like it among Australian importers
- Hides the busy showroom backgrounds
- Motion earns attention in the pitch

Risks

- Dark sites can feel exclusive to a family buyer
- The hero needs a hand-traced outline per featured car

HOMEPAGE

CAR PAGE

Direction C · mock-up

The gallery

Light, calm and editorial. A serif headline, generous space, and one featured car at a time with a label like an exhibit card. The opposite of a car yard.

Who it puts first

The luxury-for-less buyer comparing a Crown or an LS with a new mid-range car, and anyone put off by “JDM” styling.

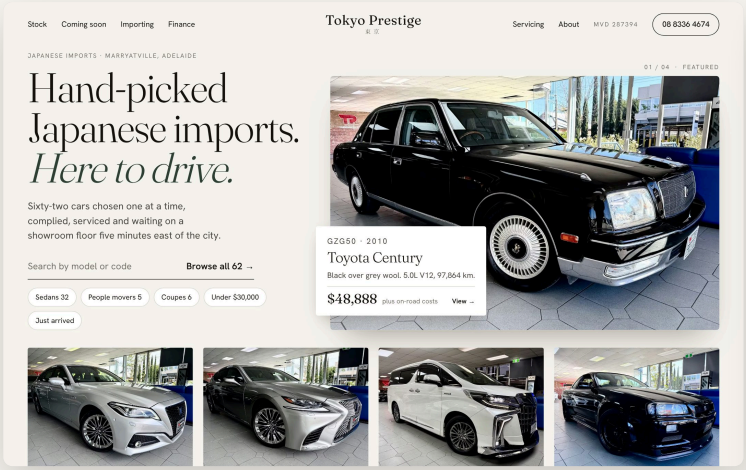

From the research

Classic Throttle Shop and Romans International feel premium through light type, uniform photos and space. Buyers of Crowns and Lexus talk about condition and comfort, not heritage.

Colour

Type

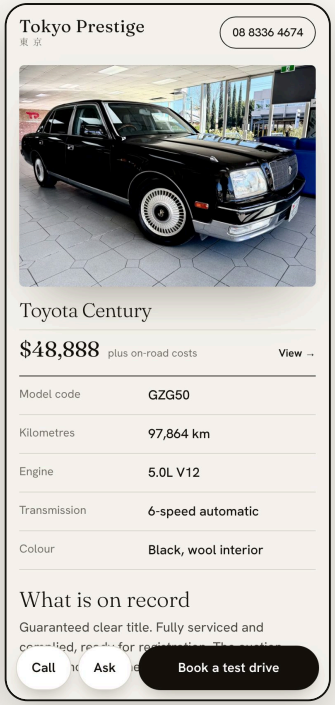

Fraunces, light. Hanken Grotesk.

HOMEPAGE, DESKTOP

HOMEPAGE

CAR PAGE

Strengths

- Reads as prestige, not performance
- Welcoming to families and older buyers
- Light pages suit long reading

Risks

- Shows the showroom backgrounds as they are; wants better photos
- Search is quieter, so finding a car takes a tap more
- Least “Tokyo”

Direction D · mock-up

Find it fast

A marketplace layout. No hero image: the search, quick filters and the first eight cars with prices are all on the first screen, with Call and Enquire on every card.

Who it puts first

The family and budget buyer who arrives from Carsales or Facebook with a price in mind and wants to compare quickly.

From the research

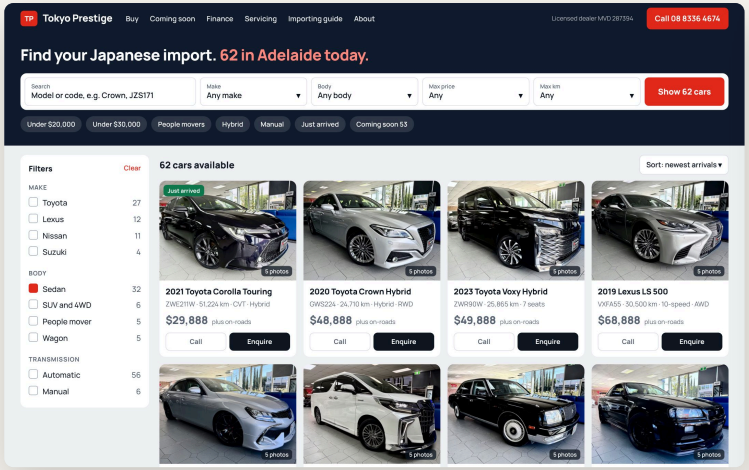

Autotrader and AutoProject lead with search, a live count and price. On Tokyo Prestige's current phone homepage the first price is 8,070px down, and every filter on the stock page is empty.

Colour

Type

Manrope, bold.

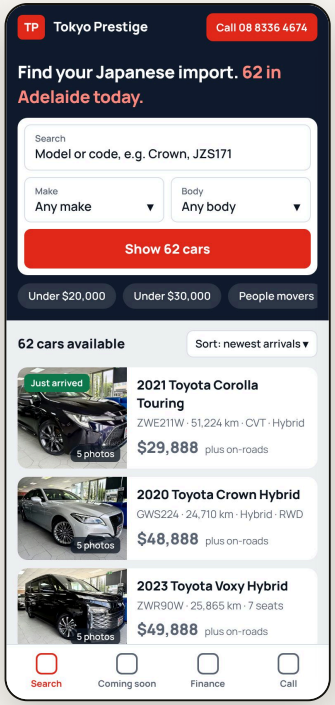

HOMEPAGE, DESKTOP

Strengths

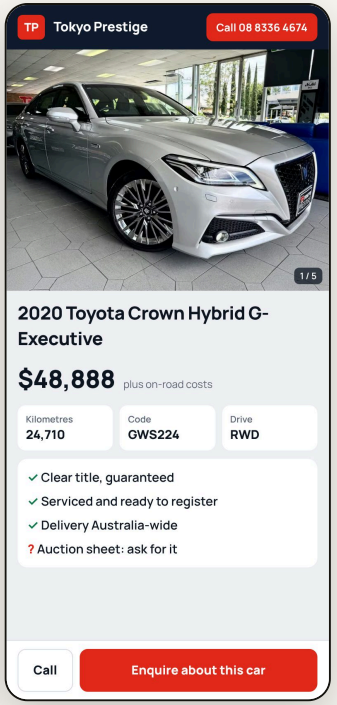

- Fewest taps to a car and a price
- Familiar: nothing to learn
- Uses their red

Risks

- Looks like every marketplace; little reason to remember it
- Flattens a GT-R and a kei truck into the same card
- Least impressive in a pitch

HOMEPAGE

CAR PAGE

Direction E · mock-up

Built on Astryx

The site assembled from Astryx, the open design system from Meta that Lumen already works with: rounded page panels on a cool grey ground, white cards, pill badges, segmented controls and filled inputs. Tokyo Prestige gets its own theme; the red is the only colour changed.

Who it puts first

Every buyer equally. It reads as a well-made product, like a good banking or booking app, more than as a car advertisement.

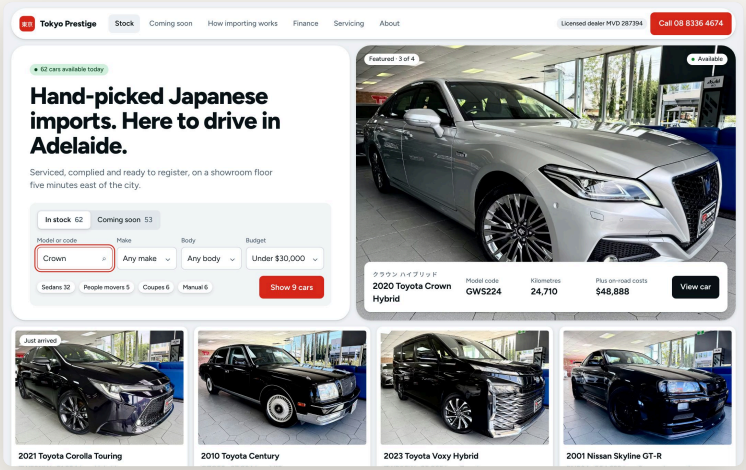

From the research

Buyers arrive suspicious and choose the dealer who looks organised and open. Mobbin's best listing pages (Turo, Airbnb) are built from exactly these parts. Astryx brings tested focus states, 44px touch sizes and dark mode with it.

Colour

Type

Figtree, as in Astryx's Neutral theme.

HOMEPAGE, DESKTOP, LIGHT

Strengths

- Light and dark from one set of tokens
- Accessible parts, already tested
- Quickest to extend: every new page is made of the same components
- Uses their red

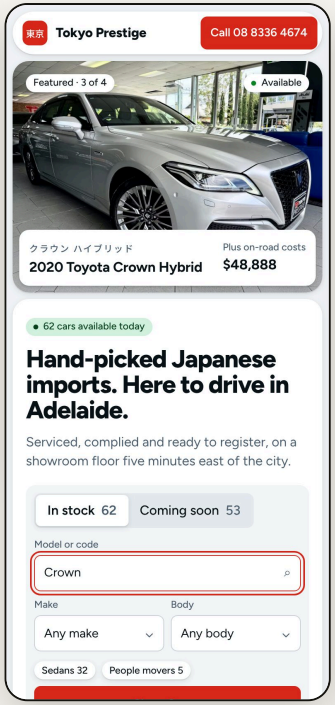

Risks

- Friendly and neutral; less drama than A for a GT-R
- Shows the showroom backgrounds as they are
- Could read as an app more than a showroom

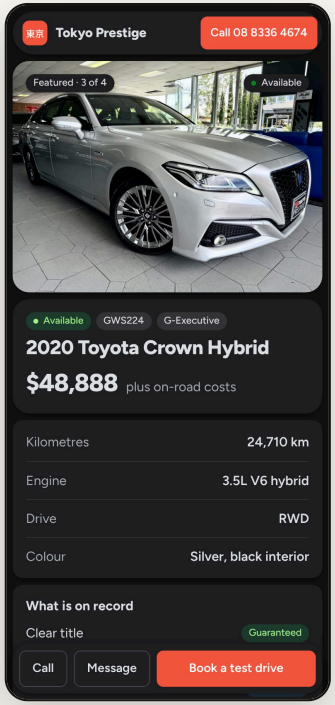

The theme, in Astryx's own terms

```
defineTheme({ name: 'tokyo-prestige', tokens: { '--color-accent': ['#D7281B', '#F4553F'] } })
```

EVERYTHING ELSE IS AN ASTRYX DEFAULT: RADIUS 4 / 8 / 12 / 28, FOCUS RING 2PX, EASE (.24, 1, .4, 1)

HOMEPAGE, LIGHT

CAR PAGE, DARK

Direction J · mock-up

The figures

Every car is introduced by the same four figures in the same order: year, kilometres, gearbox, price. They are set large and light with small units, above one wide photo. A slim bar keeps the price and the actions in reach.

Who it puts first

The careful buyer. The four things people ask first are read before anything else.

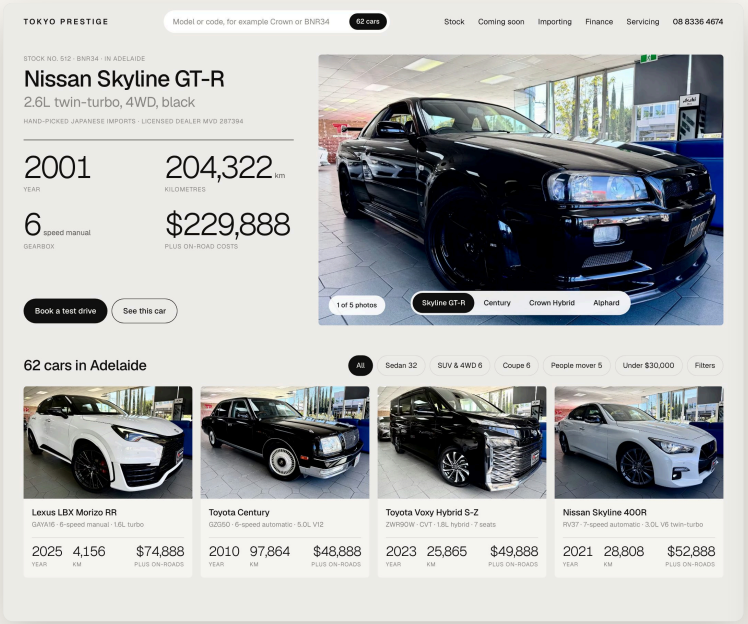

From the research

The best listings keep a fixed order of facts (Cars & Bids); premium is restraint, with big figures beside a big price (Classic Throttle Shop, Porsche). Their first price is 8,070px down the phone homepage today. On Mobbin: Rivian's figures over the car.

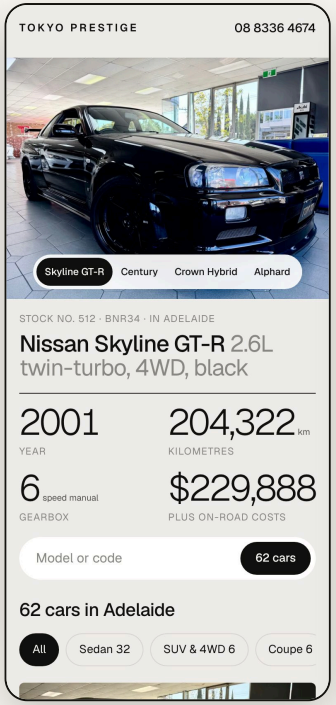

Colour

Type

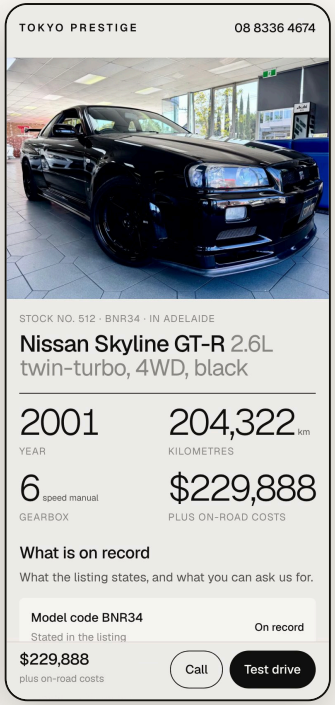

Geist, light figures.

HOMEPAGE, DESKTOP

HOMEPAGE

CAR PAGE

Strengths

- One grammar from hero to card to car page: easy to scan 62 cars
- Light and calm; works with their photos as they are
- Price and actions always in reach

Risks

- Kilometres are set as large as the price: honest, and it may not flatter a 204,322 km car
- Quiet: it will not win on drama

Which one, and why

	A · SHOWROOM AT NIGHT	C · THE GALLERY	D · FIND IT FAST	E · ASTRYX	J · THE FIGURES
First impression	Cinematic, expensive	Calm, refined	Practical, familiar	Organised, modern	Exact, calm
Buyer it favours	Enthusiast, luxury	Luxury-for-less, family	Family, budget	All, evenly	The careful buyer
Layout	Full-screen showcase, search docked below	Headline beside one framed car	Search bar, filter rail, card grid	Rounded panels: search beside a featured car	Four figures over one wide photo, cards below
Taps to a car with a price	0 (featured car), 1 to the list	0 (five shown)	0 (eight cards)	0 (five shown)	0 (featured car)
Works with today's photos	Yes: the room is darkened	Partly: backgrounds show	Yes: photos are small	Partly: backgrounds show	Yes
Needs from the dealer	Nothing new	Cleaner photography	Nothing new	Nothing new	Nothing new
Stands apart from competitors	Most	Moderately	Least	Moderately	Moderately

My recommendation: A, with J's figures inside it.

A is the one the owner will remember and it flatters the stock they have photographed today. J's four figures, always in the same order, can be taken into A's cards and car pages without changing its look.

E is the strongest alternative.

It is the easiest to build on and to keep consistent, it has light and dark built in, and it uses their red. If the owner finds A too dark or too dramatic, E is where I would go. The two also combine: A's hero and car photography over E's components, which is close to how A's forms and filters are already built.

If the owner wants lighter or simpler.

C is the safer choice for a buyer base that is mostly Crowns, Lexus and people movers, but it should wait for better photos. D would be the quickest to build and the easiest to use, and the least likely to win the project on looks. A light theme of A is also possible.

Automation and AI: one car, from Japan to a sale

Automation does the chasing and the typing. AI drafts. A person approves anything that states a fact about a car.
None of this is built for Tokyo Prestige yet; the lead alert and ad tracking run on Lumen's own site today.

STAGE	WHAT HAPPENS BY ITSELF	WHAT AI DRAFTS FOR A PERSON TO APPROVE
Bought in Japan	The approved auction sheet and its translation appear on the car's page	**Auction sheet reader:** a photo of the sheet becomes translated notes, grade, kilometres, chassis code and marked damage, as a draft listing
On the water	Coming soon with “tell me when it lands”; a waiting list per car	**Weekly demand report:** longest waiting lists, and searches that found nothing, for whoever buys at auction
Lands in Adelaide	Everyone waiting is messaged; the listing is checked (code, body, gearbox, photos); videos captioned	The social post, Marketplace text and ad, written from the listing
A buyer enquires	An alert on a phone in seconds, with the car and a tap to call; a text back after a missed call	A summary of the buyer and a reply from that car's details; an after-hours assistant that answers only from stock and the FAQ
Test drive and sale	Reminders before a test drive; follow-up after two quiet days or a price change; sold everywhere in one tap	
After delivery	A review request; service reminders for the workshop	

Where we hold the line.

AI never states a price, grade, kilometre reading, warranty or finance figure on its own. It quotes the listing or passes to a person.

No edited or generated car photos.

Every photo is the car as it stands in the showroom. A cleaned-up picture of a used car misleads a buyer.

To show it working we need:

how stock is loaded today, who answers enquiries, and one real auction sheet. The interactive version of this proposal is at /proposal on the demo.
